SCC

Superior Canopy Corporation provides the finest steel building structure on the market. From design to functionality, our buildings are simply Superior. Installation takes only a few days, and can take place during almost any weather condition.

Strength of Steel

Our structural steel framework is constructed of the finest tube steel on the market. The steel framework consists of 4" x 4" corner posts and top plates, 3" x 4" studs, and 2" x 4" floor plates.

Exterior view of Superior Building.

Wall Panels

After the steel framework is installed, insulated wall panels are affixed to them. These wall panels have a 3 1/2" thick poly expanded styrene core that is laminated either with OSB, or pre-painted 24 gauge steel. The result is an insulated wall panel with a minimum R rating of 25! The steel fascia is available in a wide variety of colors, including all of the major oil specified colors.

Roofing

Full roof support for any roof top equipment. All roof top square footage is available. We can provide roofs in several styles including flat, standing seam, mansard, or full truss style.
